

Drax Power Station

Industrial – Power & Control Services

ELECTRICAL
ENGINEERING LTD

C & S Electrical Engineering Limited carried out specialist Industrial wiring services for Drax Power Station. Drax is a large coal-fired power station in North Yorkshire, capable of co-firing biomass and petcoke. Its generating capacity of 3,960 megawatts is the highest of any power station in the United Kingdom and Western Europe, providing about 7% of the UK's electricity. C & S Can offer its clients, full flexibility and diversity, from a complete electrical installation to modifications to existing wiring for new control systems. We can assist in the relocation (disconnection and reconnection) of heavy duty machines for factory relocation locally or anywhere in the world.
